Engineering

Title

SQE Lead Engineer

Expertise Level

Experienced Professional

Travel

Occasional

Location

San Francisco, CA

The Challenge

Work with a world-class team to sustain a high level of quality in our product. As a SQE lead engineer, you will be responsible for implementing automated test tools, creating test harnesses, and ensuring the validity and quality of product releases. You will also be responsible to work with remote teams to help set priorities for the team to deliver a high quality product. If you're an engineer who loves to release “battle hardy” software and are interested in building a product that defines the next wave of analytics, this is the job for you.

Requirements

- Experience partnering with Product Management, development, and other internal teams to review, inspect, document, and ensure the quality of product requirements.
- Experience leading a high energetic global QE team.
- Solid background of developing & executing test plans and analyzing & reporting test results.
- Strong background in implementing test automation at the API and UI levels with commercially available tools (such as Silk Test & Performer).
- Solid experience with maintaining schedules, providing guidance during design, and with identifying and recommending changes to established practices and policies.
- Background in analytic or business intelligence, web services, Services Oriented Architectures, and/or enterprise scale software.
- Web server development experience a plus (on app. servers such as JBoss, WebLogic, or WebSphere)
- Experience in development based on Design Patterns, data modeling, UML, Java, XML and/or FlashMX.
- Multi-OS development experience with Unix/Linux and Windows.
- Experience with Pharmaceutical software validation a plus.
- Proven track record for being detail-oriented.
- Strong desire to learn and share information with others.
- Demonstrated ability to be self-motivated and a strong technical contributor who tenaciously follows-through on projects.
- Experience with remote development teams a plus.

Your Background

- BS/MS in Computer Science or related degree.
- 6+ years of SQA experience.

Team Culture

We value taking PRIDE in what we do:

- ❑ Professionalism—High standards of workmanship and professionalism.
- ❑ Results—No nonsense focus on results.
- ❑ Innovation—Respect for innovation and creativity.
- ❑ Domain—Pride in how our technology helps our customers and the responsibility that goes along with it.
- ❑ Empowerment—Respect for the Individual.
